

Welcome to the Geographic Names Server

The Geographic Names Server (GNS) is the official repository of standard spellings of all foreign geographic names, sanctioned by the United States Board on Geographic Names (BGN). In addition to the current approved names of features, users may find variant and historical spellings, along with non-Roman script spellings. Each record contained within provides information on the feature's location, administrative division, and designation (e.g., populated place, stream, mountain). The GNS can be used for finding places, GIS data, cartography, and GEOINT products.

The geographic names in this database are provided for the guidance of and use by the Federal Government and for the information of the general public. The names, variants, and associated data may not reflect the views of the United States Government on the sovereignty over geographic features. NGA is not responsible for third party uses of GNS feature coordinates.

There are no licensing requirements or restrictions in place for the use of the GNS data. However, we recommend using the following citation to identify the GNS as a source:

Toponymic information is based on the Geographic Names Database, containing official standard names approved by the United States Board on Geographic Names and maintained by the National Geospatial-Intelligence Agency. More information is available at the Resources link at www.nga.mil. The National Geospatial-Intelligence Agency name, initials, and seal are protected by 10 United States Code  Section 425.
